PREFACE	3
C H A P T E R 1 BULK AND SURFACE PLASMONS	5
§ 1.1. Bulk plasmons.....	5
§ 1.2. Consideration of bound electrons in metals.....	13
§ 1.3. Plasmon dispersion law.....	16
§ 1.4. Plasmon lifetime	19
§ 1.5. Sound plasmons.....	21
§ 1.6. Surface plasmons	25
§ 1.7. One-dimensional surface plasmons.....	32
§ 1.8. Surface plasmon-polaritons on the metal-dielectric interface	35
§ 1.9. Excitation of surface plasmons.....	48
§ 1.10. Observation of surface plasmons	51
C H A P T E R 2 OPTICAL PROPERTIES OF SPHERICAL AND ELLIPSOIDAL NANOPARTICLES AND SHELLS	53
§ 2.1. Electrodynamic properties of nanoparticles	53
§ 2.2. Mi theory of absorption and scattering of light by isolated spherical nanoparticles.....	62
§ 2.3. Surface modes in nanoparticles.....	70
§ 2.4. Dimensional corrections to the dielectric permeability of the nanopar- ticle	73
§ 2.5. Absorption and scattering of light by isolated spherical shell nanopar- ticles	76
§ 2.6. Influence of the magnetic component of the field on the scattering of light by nanoparticles	78
§ 2.7. Influence of the magnetic component of the field on the scattering of the electromagnetic wave with a metal nanoellipsoid	86
C H A P T E R 3 THE OPTICS OF METAL-DIELECTRIC NANOCOMPOSITES	98
§ 3.1. Electrodynamic and electrophysical properties of multicomponent media	98

Contents

§ 3.2. Theories of an effective medium for nanocomposites	107
§ 3.3. Spatial and polarization anisotropies of optical spectra of composites based on an ordered array of non-spherical nanoparticles	119
§ 3.4. The effect of the relationship between aspherical form nanoparticles and the degree of ordering of them on surface plasmon modes	121
§ 3.5. Binary composites with rare inclusions	122
§ 3.6. Effective magnetic permeability of the composite medium.....	125
§ 3.7. Binary media with increased concentration of inclusions	127
§ 3.8. Optics of layered systems.....	133
§ 3.9. Absorption of electromagnetic radiation in composites with multilayer ball inclusions	142
§ 3.10. Effective dielectric permeability of composites with two-layer ball inclusions	147
§ 3.11. Optical properties of nanocomposites based on carbon nanotubes.....	153
§ 3.12. Examples of solved problems of optics of metal-dielectric composites	155
C H A P T E R 4. PLASMON EFFECTS IN NANOPARTICLES OF VARIOUS GEOMETRY AND SIZES	162
§ 4.1. Dispersion law and excitation conditions of surface plasmons in spherical nanoparticles.....	162
§ 4.2. Effect of the size of the nanoparticles on the characteristics of surface plasmons.....	164
§ 4.3. Effect of interaction between nanoparticles on surface plasmon characteristics	167
§ 4.4. Influence of temperature on the characteristics of surface plasmons in the nanoparticle	170
§ 4.5. Plasmon resonances in nanospheroids	172
§ 4.6. Optical properties of nanospheroids.....	179
§ 4.7. Consideration of the effects of propagation time lag in the nanoparticle of spheroidal and related forms	184
§ 4.8. Localized plasmons in multifaceted nanoparticles	187
§ 4.9. Properties of localized plasmons in a complex form nanoparticle	190
§ 4.10. Amplification of the electric field due to excitation of surface plasmons in metal nanoparticles	200
C H A P T E R 5 PLASMONS IN NANOPARTICLES' CLUSTERS	206
§ 5.1. Classification of plasmon oscillations in a cluster	206
§ 5.2. Plasmons in a cluster of two identical nanospheres	213
§ 5.3. Amplification of local fields in a cluster of two nanospheres	217
§ 5.4. Plasmons in particles with asymmetric nanocladdings and in a cluster of two different nanospheres	218
§ 5.5. Plasmons in the nanocontact zone of two plasmon bodies with unlimited volume	220

Contents

§ 5.6. Plasmon oscillations in a cluster of more than two nanoparticles	222
§ 5.7. Van der Waals forces between plasmon nanoparticles	233
§ 5.8. Excitation of collectivized plasmons in nanoparticles' clusters	237
C H A P T E R 6 PLASMONS IN METAL DIELECTRIC COMPOSITES AND SHELLS	240
§ 6.1. Surface plasmons in nanoparticles-based composites.....	240
§ 6.2. Surface plasmons in layered media	243
§ 6.3. Plasmon oscillations in the spherical shells of nanoparticles.....	247
§ 6.4. Plasmon oscillations in spheroidal shells.....	248
§ 6.5. Spectrum of surface excitations of ball nanoparticles above the substrate	252
C H A P T E R 7. The application of nanoplasmonics	258
§ 7.1. Therapy and visualization of tumours with nanoparticles	258
§ 7.2. Biosensors based on surface plasmons	261
§ 7.3. Biosensors based on localized plasmons.....	263
§ 7.4. Spectroscopy of individual plasmon nanoparticles	267
§ 7.5. Use of surface plasmons for high-precision measurements of optical characteristics of metals	269
§ 7.6. Element base for integrated circuits on plasmons	273
§ 7.7. Applications based on the effect of nanoparticles on the fluorescence of atoms and molecules	278
§ 7.8. Photodetectors and solar batteries.....	285
§ 7.9. Nanoantennas.....	292
§ 7.10. Surface-enhanced Raman spectroscopy	300
§ 7.11. Spasers	319
LIST OF NOTATION CONVENTIONS AND ABBREVIATIONS	329
LIST OF REFERENCES	331
