Inverse Heat Conduction Problems in 2 volumes. Vol. 1  
Methodology. / Matsevity Yu. M.: NAS of Ukraine,  
Institute for Problems in Mechanical Engineering –  
2008. – 428 p.

The monograph deals with statements and methods for solving inverse heat conduction problems (IHCP). It also discusses issues in the well-posed statement of these problems and methods for regularizing the solution of ill-posed problems. Emphasis is on parametric identification of thermal processes based on automated fitting methods; spectral influence functions, and lumped capacity and optimal dynamic filtering techniques. The monograph demonstrates the ways of implementing these methods using digital, analog and hybrid computers for identification of boundary and initial conditions (boundary and retrospective IHCP); and thermophysical and geometric characteristics (inner and geometric IHCP) to solve combined IHCP and optimization problems. The monograph presents the results of solving IHCP for power industry and mechanical engineering applications, as well as for metallurgical and metalworking processes.

The monograph is intended for scientists and technologists working in the field of thermal physics and heat engineering. The book can have a practical value for post-graduates, and instructors and students of technical higher educational institutions.

218 Figures and 38 Tables. References: 830 titles.

# CONTENTS

Preface to the English edition.....	5
References.....	21
Preface.....	33
Key symbols and acronyms.....	377
CHAPTER I THEORY. GENERAL ASPECTS.....	49
I.1. Terminology.....	49
I.2. Mathematical Model of the Heat Conduction Phenomenon.....	56
I.3. Transformation of Mathematical Models.....	61
I.4. Discretization of Mathematical Models.....	67
I.5. Classification of Inverse Heat Conduction Problems.....	75
CHAPTER II WELL-POSEDNESS OF STATEMENTS OF INVERSE HEAT CONDUCTION PROBLEMS.....	79
II.1. Conditions of Well-Posedness.....	79
II.2. Kinds of Statements.....	83
II.3. On Existence and Uniqueness of Solutions.....	88
II.4. Solution Stability.....	92
CHAPTER III METHODS AND MEANS OF SOLVING INVERSE HEAT CONDUCTION PROBLEMS.....	95
III.1. Stages and Methods of Solving.....	95
III.2. Computing Machinery.....	101
III.3. Digital Computers.....	103
III.4. Analog Devices.....	104
III.5. Hybrid Systems.....	108

CHAPTER IV DETERMINISTIC METHODS.....	119
IV.1. Conditionally-Regular Methods.....	119
IV.2. Regularization by Desensitization.....	126
IV.3. Imposing Constraints on the Algorithm.....	128
IV.4. Tikhonov Regularization.....	138
IV.5. Regularizing Algorithms and Their Features.....	146
CHAPTER V AUTOMATED FITTING METHOD.....	157
V.1. General Characteristic of the Method.....	157
V.2. Parameterization of Sought For Functions.....	158
V.3. Methodology Aspects.....	162
V.4. The Objective Functional and Its Minimization.....	164
V.5. Accuracy Aspects.....	166
V.6. Analog Implementation.....	171
V.7. Hybrid Implementation.....	177
CHAPTER VI METHOD OF SPECTRAL INFLUENCE FUNCTIONS.....	184
VI.1. Methodology Issues.....	184
VI.2. Spectral Influence Functions.....	186
VI.3. Transient Problem.....	191
VI.4. Nonlinear Case.....	194
VI.5. Regional Spectral Influence Functions.....	195
VI.6. Spectral Influence Functions in Heat Object Control Problems.....	202
VI.7. Regional-Analytical Identification of Float Flows.....	206
CHAPTER VII LUMPED-CAPACITY METHOD.....	213
VII.1. The Notion of Lumped Capacity.....	213
VII.2. Methodology aspects.....	218
VII.3. Lumped capacity in identification problems.....	224
VII.4. Transition from initial models to lumped-capacity ones.....	227
VII.5. Heat transfer identification in systems with surface sources....	232

VII.6. Prospects of using the method for solving inverse heat conduction problems.....	236
<b>CHAPTER VIII STOCHASTIC METHODS.....</b>	<b>246</b>
VIII.1. General.....	246
VIII.2. Statistical regularization.....	256
VIII.3. Conditionally-regular methods.....	264
VIII. 4. Principles of dynamic filtering (the Kalman filter).....	267
<b>CHAPTER IX OPTIMAL DYNAMIC FILTERING METHOD.....</b>	<b>272</b>
IX.1. Methodology aspects.....	272
IX.2. Filter Quality Improvement Methods.....	279
IX.3. Iterative filter.....	284
IX.4. Iterative Filter Properties.....	290
IX.5. Truncated filter.....	298
IX.6. The truncated filter in hybrid systems.....	302
IX.7. Modification of the filter for solving inner inverse heat conduction problems.....	306
IX.8. Adaptive filter.....	313
IX.9. Adaptive filter properties.....	319
IX.11. Performance of filtering algorithms for solving inner and combined inverse heat conduction problems.....	329
IX.12. Optimal dynamic filtering and control problems.....	350
