Reviewers:

S. Ya. KUCHMIY, Corresponding member of the NAS of Ukraine, Chair of Department,
L. V. Pisarzhevsky Institute of Physical Chemistry of the NAS of Ukraine

Yu. A. MALETIN, Professor, Chair of Department, Institute for Sorption
and Problems of Endoecology of the NAS of Ukraine

*Approved for publication by the Scientific Council
of the Institute for Sorption and Problems of Endoecology of the NAS of Ukraine
(17.07.2015, protocol 6)*

*Publication was funded in frame of the targeted Complex
Program " Creation and Development of Scientific Publishing Complex
of the National Academy of Sciences of Ukraine"*

Kapinus E. I.

20 Energy, charge and electron transfer processes in chemistry /
E.I. Kapinus; NAS of Ukraine, Institute for sorption and problems
of endoecology. — K. : Akademperiodyka, 2016. — 135 p.

ISBN 978-966-360-322-3

The book consists of three main sections on the energy, charge and electron transfer in chemistry. The book anticipates the historical and scientific introduction. The first chapter discusses the intermolecular electronic energy transfer. In the chapter on the electronic states of EDA complexes the phenomena of charge transfer are considered. In the chapter on thermal and photochemical electron transfer kinetics and thermodynamics of processes with electron transfer, the physical model of electron transfer by Marcus discusses, the influence of the solvent on these processes is discussed including the classification of electron transfer processes.

CONTENS

PREFACE.....	5
TABLE OF SYMBOLS AND ABBREVIATIONS.....	7
CHAPTER 1	
INTRODUCTION.	
SCIENTIFIC CHEMICAL CONCEPTIONS	9
1.1. Electron transfer.....	11
1.2. Intermolecular energy transfer.....	13
1.3. Charge transfer and the donor-acceptor complexes.....	14
CHAPTER 2	
INTERMOLECULAR ELECTRONIC ENERGY TRANSFER	
2.1. Radiative and nonradiative energy transfer of electronic excitation.....	17
2.2. Radiative (trivial) process.....	18
2.3. Nonradiating inductive resonance transfer of excitation energy.....	19
2.4. Kinetics of energy transfer processes.....	22
2.5. Nonradiative exchange-resonant energy transfer allowed by spin rules.....	23
CHAPTER 3	
ELECTRONIC STATES OF DONOR-ACCEPTOR SYSTEMS AND TRANSITIONS BETWEEN THEM	
3.1. Charge transfer and donor-acceptor complexes.....	28
3.2. Excimers and exciplexes.....	29
3.3. Exciplexes.....	30
3.4. Triplet exciplexes.....	33
3.5. Triplet exciplexes of porphyrin compounds.....	34
3.6. Triplet exciplexes of carbonyl compounds.....	36
3.7. The quenching kinetics of the triplet exciplexes of porphyrin compounds	37
3.8. Intersystem crossing in donor-acceptor systems.....	42
CHAPTER 4	
THE IONIC DISSOCIATION OF EXCITED EDA COMPLEXES	
4.1. The ionic dissociation of excited EDA complexes	44
4.2. Quantum yields of the products of ionic dissociation.....	44

Contents

4.3. Influence of reagents nature on deactivation rate of triplet exciplexes.....	52
4.4. Triplet exciplexes of dyes and related compounds.....	54
4.5. Intersystem crossing of molecular EDA complexes.....	54
4.6. Intersystem crossing of exciplexes.....	56

CHAPTER 5

**THERMAL AND PHOTOCHEMICAL
ELECTRON TRANSFER**

	59
5.1. Electron transfer and donor-acceptor complexes.....	59
5.2. Kinetics and thermodynamics of electron transfer processes: quenching of excited states	60
5.3. Marcus theory.....	63
5.3.1. Physical model of electron transfer reactions.....	63
5.3.2. Changing rate constants in time	64
5.3.3. Adiabatic and nonadiabatic behaviour.....	65
5.3.4. Nuclear tunneling and the problem of inverted area.....	66
5.4. The kinetics of the electron transfer processes.....	66
5.4.1. Quenching kinetics.....	66
5.4.2. The problem of excited states deactivation induced by quencher.....	72
5.5. The influence of reagent nature and temperature on the rate constants of triplets quenching by electron acceptors.....	74
5.6. The peculiarities of triplet porphyrins quenching by oxidants in polar solvents.....	80
5.7. The classification of liquid phase bimolecular photochemical redox transformations.....	80
5.8. The influence of medium properties on the diffusion-controlled quenching of triplet porphyrin molecules by quinones.....	81
5.9. Quenching fluorescence of aromatic compounds by electron acceptors.....	83
5.10. Reactivity of excited singlet and triplet porphyrins in electron transfer processes.....	91
5.11. Solvent influence on the kinetically controlled quenching processes of excited organic molecules by electron acceptors.....	93
5.12. Solvent influence on kinetically controlled processes of aromatic hydrocarbons fluorescence quenching by amines.....	96
5.13. The pseudodiffusion quenching of aromatic compounds fluorescence by electron donors and acceptors.....	97
5.14. Antidiffusion quenching processes with the participation of porphyrins and electron acceptors.....	101
5.15. The quantum effects in electron transfer processes.....	103
5.16. Static quenching of tetrapyrrole pigments fluorescence by electron acceptors in alcohols and water.....	105
CONCLUSIONS.....	111
