I.M. KAPIT

()

This information material is aimed at developing of the long-term plans for the transformation of obsolete district heating systems (DHS) into modern energy efficient systems. The general description and analysis of the condition of existing DHS of the cities and settlements of Ukraine are given. The regulatory framework in this sphere is described. The trends, plans and specific projects for the development of district heating in European countries are analysed. The conceptual provisions and the methodology for the development of long-term plans for energy efficient modernization of DHS are formulated. The main directions of modernization and development of the systems are considered. Modern tools for developing the long-term plans for the DHS modernization and effective operation, including geo-information systems, energy management systems are proposed.

The material is intended for employees of municipalities, heat supply organizations, scientists and specialists working in the municipal energy sphere, as well as for teachers and students of energy specialties of higher education institutions.
